

Viking longship by Emma and Roman

What were they for?

the vikings built fast ships for riding and war.

What were the sails like?

A viking ship had a large squair made of woven wool it was brittle and could be in strips or dimons patons.

How big were they?

A big Viking longship was about 30 meters long and could hold 60 men.

How were they built?

They were made from planks of oak wood jointed together.

These overlapped each other, which made the ship very strong.
